Professional Summary

MSc Data Science student at the University of Greenwich with a background in Computer Science and Data Science. Experienced in Python programming, data analysis, machine learning, and web development through internships and academic projects. Skilled in data cleaning, exploratory data analysis, model development, and visualisation. Interested in applying analytical and technical skills to solve practical problems and develop data-driven solutions.

Technical Skills

Programming: Python, SQL, Java
Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), Data Cleaning, Data Visualisation
Machine Learning: Scikit-learn, TensorFlow, Keras, CNN, NLP, Model Evaluation
Data Visualisation Tools: Matplotlib, Seaborn
Web Development: HTML, CSS, JavaScript, Flask
Tools: Git, GitHub, Jupyter Notebook, VS Code, OpenCV

Professional Experience

Data Science Intern – SAK Informatics **April 2024 – May 2024**
Remote, India

- Worked with datasets to perform data cleaning, preprocessing, and exploratory data analysis.
- Used Python-based tools to organise, analyse, and interpret data for meaningful insights.
- Gained practical experience in analytical workflows, data handling, and working in a professional environment.

Software Engineer Intern – Data Science, Prodigy Infotech **October 2024 – November 2024**
Remote, India

- Completed data science tasks involving Python-based programming and analytical problem-solving.
- Applied data analysis and machine learning concepts through practical internship assignments.
- Strengthened understanding of data processing, analytical techniques, and project development.

Software Engineer Intern – Web Development, CodSoft **October 2024 – November 2024**
Remote, India

- Developed three responsive websites using HTML, CSS, and JavaScript.
- Improved website layouts, navigation, and user interaction through structured front-end development.
- Practised responsive design and debugging to improve usability across different screen sizes.

Research and Publications

Transformer-Empowered Acoustic Monitoring Framework Integrating TAO Tree Classifier for Industry 4.0 Applications
International Journal of AI Electronics and Nexus Energy, Volume 2, Issue 2, April 2026, pp. 457–469.

- Co-authored research on machine condition monitoring using acoustic signals for industrial fault identification.
- Explored transformer-based audio representations using HuBERT embeddings alongside a TAO Tree classifier.
- Studied the application of machine learning to distinguish industrial acoustic conditions and support predictive maintenance.
- **Read Published Research (DOI)**

Projects

ChatGPT Review Sentiment Prediction Model ***GitHub***

- Developed a Python-based sentiment analysis project to analyse 500+ user reviews and identify positive, negative, and neutral opinions.
- Used VADER and TextBlob for sentiment scoring, with Pandas for data processing and Matplotlib and Seaborn for visualisation.
- Improved the analysis workflow by combining sentiment outputs with visual summaries, making review patterns and user feedback easier to interpret.

Criminal Face Recognition System ***GitHub***

- Developed a Python-based face recognition application using OpenCV and the `face_recognition` library to compare facial images against stored records.
- Integrated the recognition functionality with a simple web interface built using HTML, CSS, and JavaScript.
- Improved the application workflow by connecting image processing, facial comparison, and interface components in one system. Reported recognition accuracy: 90% in the project.

DermAI Assistant – Smart Dermatology Diagnostic Tool ***GitHub***

- Built a web-based image classification application using Python, Flask, TensorFlow, CNN, and OpenCV.
- Developed a CNN-based workflow to process skin images and classify them using a trained machine learning model.
- Connected the model to a Flask interface with HTML, CSS, and JavaScript, making image submission and prediction results accessible through a web application.
- Achieved a reported classification accuracy of 85% in the project.

We2Work – Team Collaboration Web Platform ***GitHub***

- Developed a web-based collaboration platform to support team communication, task tracking, and project progress management.
- Built the interface using HTML, CSS, and JavaScript, with Flask/Node.js used in the application development.
- Organised project information and task workflows to make team activities and progress easier to manage.

Education

University of Greenwich **2026 – Present**
MSc Data Science *London, United Kingdom*

Kommuri Pratap Reddy Institute of Technology (KPRIT) **2022 – 2026**
B.Tech – Computer Science and Engineering (Data Science) *India*

- CGPA: 7.72/10

Certifications

- Data Science Internship – SAK Informatics (2024)
- Web Development Internship – CodSoft (2024)
- Data Science Internship – Prodigy Infotech (2024)
- Learnathon – ICT Academy (2024)
